

Software needed for JavaFX

1. JavaFX SDK 13

- Download JavaFX SDK from
 - Windows <http://gluonhq.com/download/javafx-13.0.1-sdk-windows/>
 - Mac <http://gluonhq.com/download/javafx-13.0.1-sdk-mac/>
- Copy the downloaded zip file to **C:** drive
- Unzip JavaFX SDK zip under in **C:** drive (this will create a folder named **C:\javafx-sdk-13.0.1**).

2. Scene Builder for Java 11

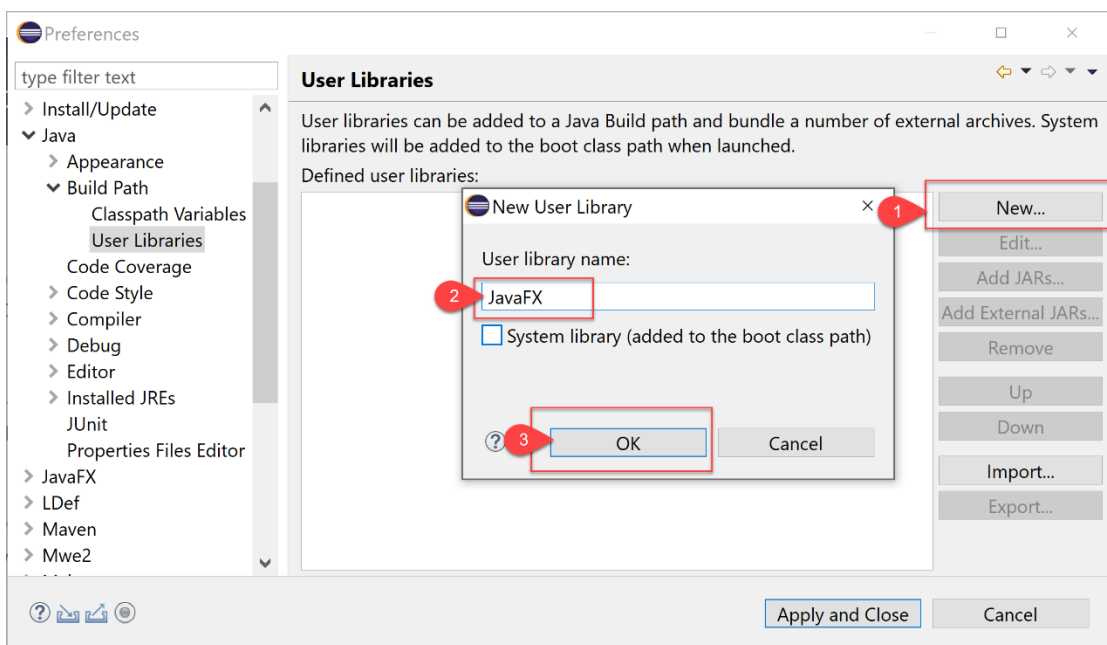

- Download and install Scene Builder for Java 11:

Windows <https://gluonhq.com/products/scene-builder/thanks/?dl=/download/scene-builder-11-windows-x64/>

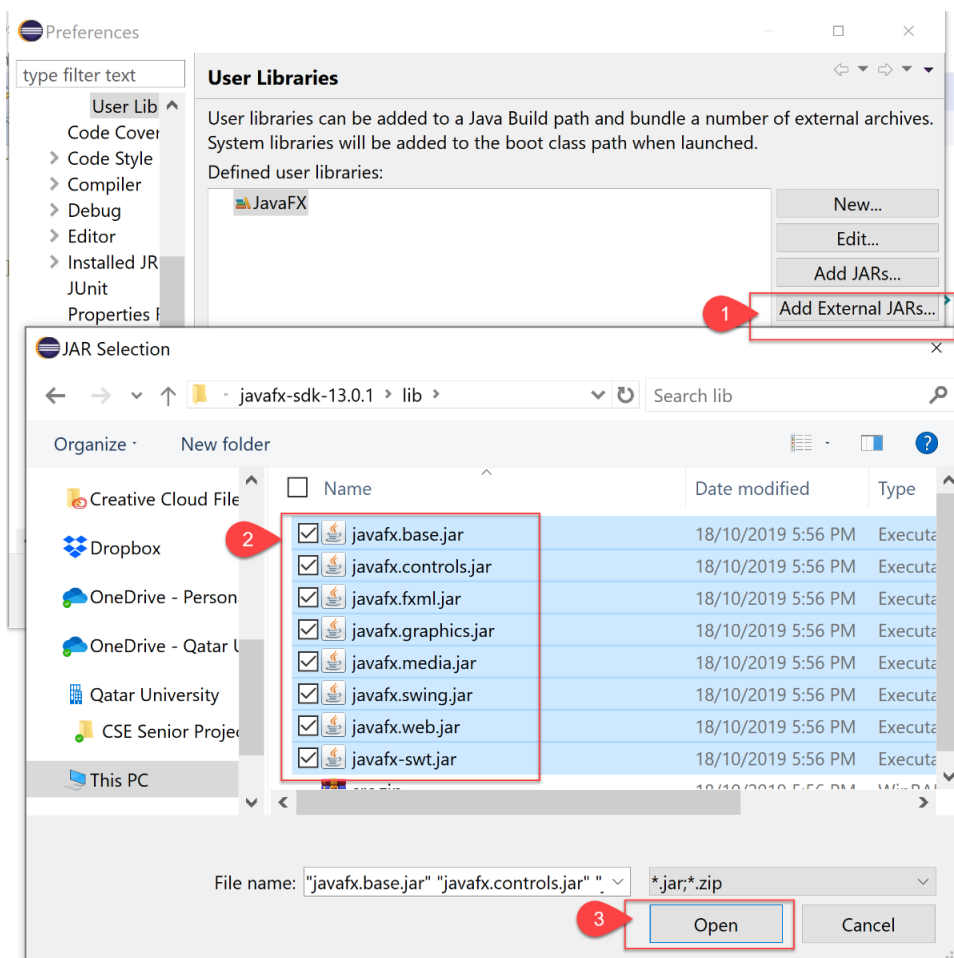

Mac <https://gluonhq.com/products/scene-builder/thanks/?dl=/download/scene-builder-11-mac/>

3. Creating JavaFX User Library

- Choose **Windows** → **Preferences** → **Java** → **Build Path** → **User Libraries**, and
- Create **New...** name it **JavaFX**

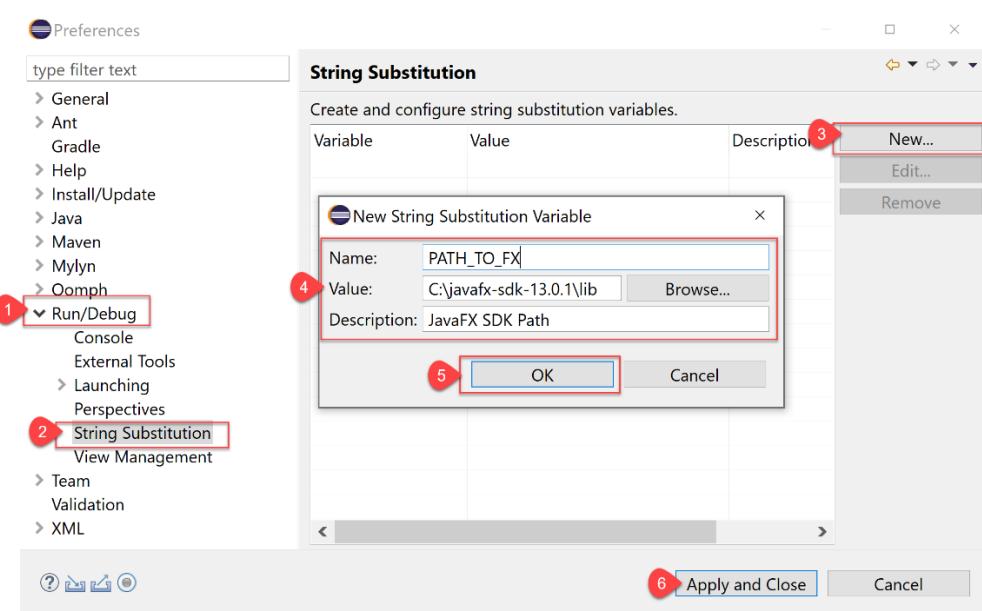

- **Add External JARS...** then **browse to C:\javafx-sdk-13.0.1\lib** and select all the .jar files (8 files) and click open. Then Apply and close.

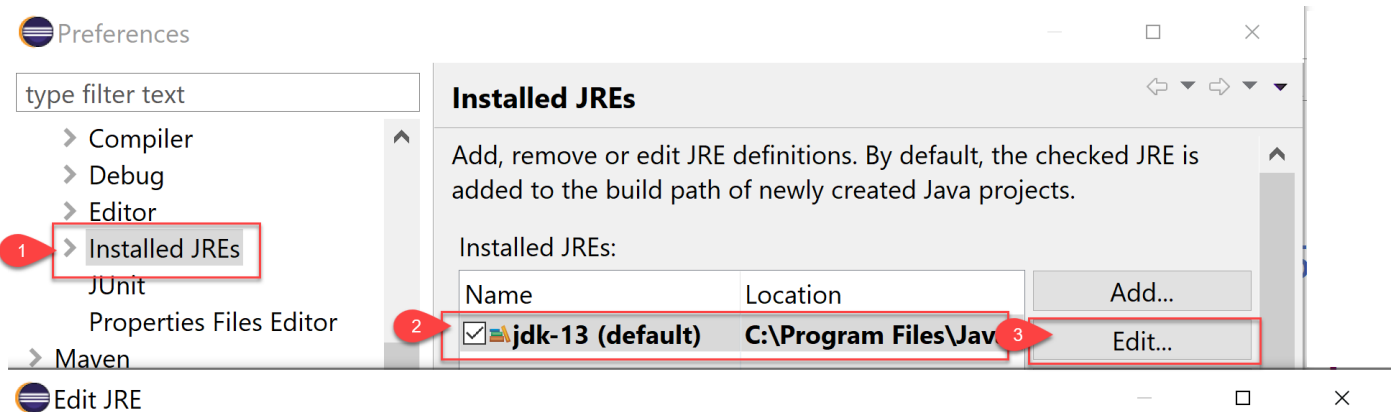

4. Configure **PATH_TO_FX** in Eclipse

- Create a string substitution variable **PATH_TO_FX** in Eclipse.
Go to **`Preferences->Run/Debug->String Substitution`**, create a String Substitution named **`PATH_TO_FX`** and set its value to the JavaFX 13 lib: **C:\javafx-sdk-13.0.1\lib**

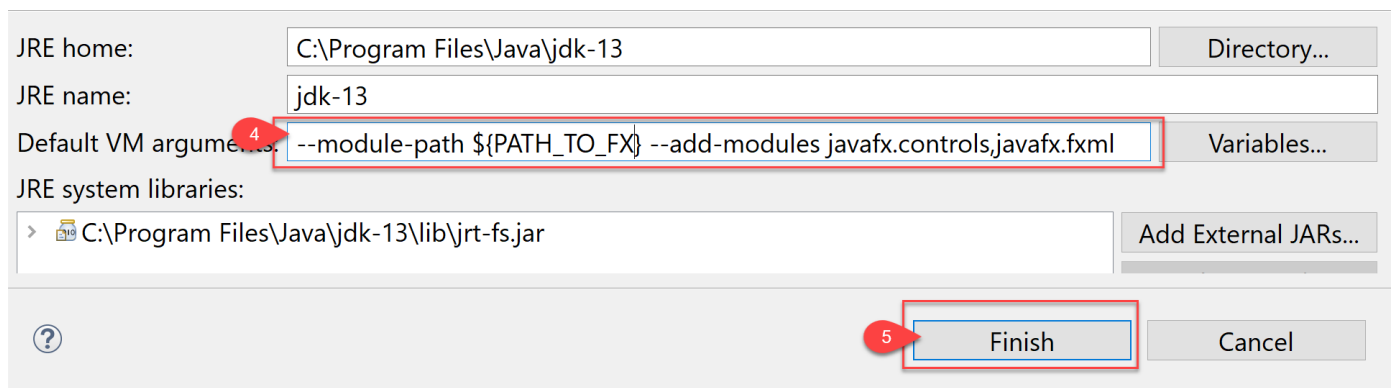

- Edit JRE for SDK 13 under Preferences → Java → Installed JREs → **Select the JRE and set the Default VM arguments to:**
--module-path \${PATH_TO_FX} --add-modules javafx.controls,javafx.fxml

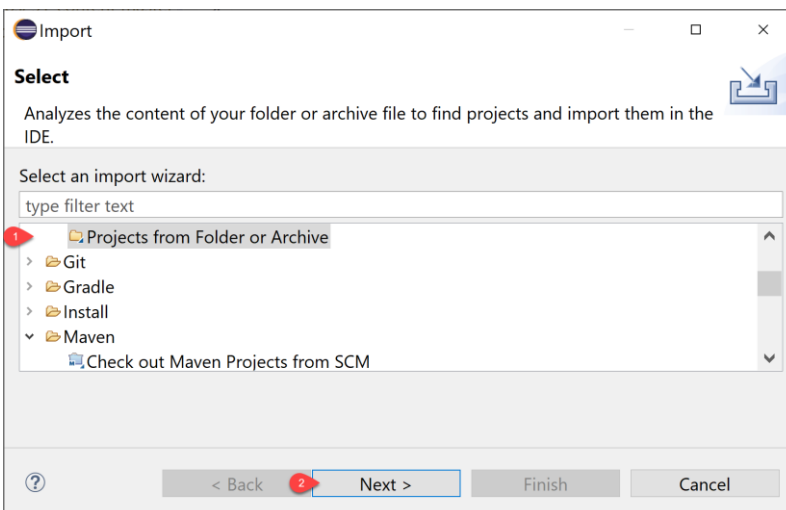

JRE Definition

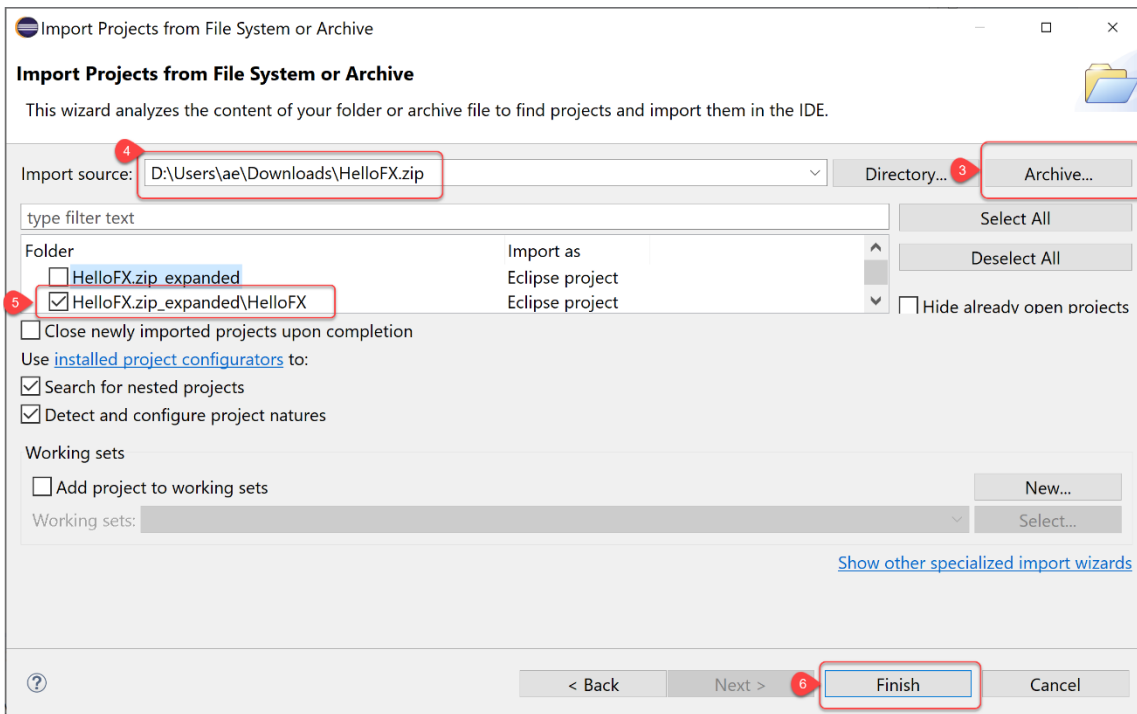

Specify attributes for a JRE

5. Verifying that JavaFX properly installed

- Download JavaFX Hello Word example @ <https://www.dropbox.com/s/o5430kx4xcippzo/HelloFX.zip>
- Then import **HelloFX.zip** into Eclipse

- Run Main.java. **You should see:**

- If you can any error please post a question with a screenshot of the error to <https://piazza.com/qu.edu.qa/fall2019/cmcs251>
